

948 j : SACO Contribution (June 28, 2007)

This subfield is for new and revised subject headings proposed to the Library of Congress via the SACO program. This subfield is also for new and revised Library of Congress Classification proposals submitted through the SACO program or via Classification Web. This subfield will also track local subject authority headings (very rare situations)

su = New original Subject Heading submitted to the Library of Congress via the SACO program

sur = Revision(s) to existing LC Subject heading proposed to the Library of Congress via the SACO program (e.g., adding 450, 670)

sl = New or revised local subject heading (created or edited directly in Voyager)

cl = New original Library of Congress Classification proposal submitted to the Library of Congress via the SACO program or via Classification Web

clr = Revisions to existing Library of Congress Classifications proposed to the Library of Congress via the SACO program or via Classification Web (e.g., adding a topical cutter, adding a date ranged)

Use a separate subfield for each type of proposal. Precede the type of contribution with the number of proposals of that type.

[Note: we will no longer be counting DLC records for which we are not adding anything new. BSLW provides those records for us and we are loading them automatically.]

Examples:

\$j 1su \$j 1clr = one new subject heading proposed; one revision to Library of Congress Classification proposed—add date range.

\$j 1sur = one revision to an existing LC Subject Heading proposed—add new 450 and 670/
