PURPOSES OF SHELFLISTING:
1. To provide a unique item cutter for each item cataloged.
   "Unique": Some variations in item cutters may distinguish between different permutations of the same work (e.g., translation cutter extensions like “13,” etc.). These item cutter permutations are not considered "unique."
2. To provide room for expansion in the online shelflist.
3. To maintain alphabetical order in the online shelflist. This is true for Biomed items, but not always possible for YRL and SEL materials.
4. NOTE: E-resources are not shelflisted

OUTLINE:
1. Some basic terminology
2. Basic policies/procedures for YRL and SEL items
   a. Table 1: Class numbers
   b. Table 2: Subject, or first of two, cutter numbers
   c. Table 3: Item cutter numbers (i.e., cutter for main entry)
3. Basic policies/procedures for Biomed items
4. Bibliography
5. Addendum A: SEL conferences
6. Addendum B: Dates in call numbers
SOME BASIC TERMINOLOGY (from Library of Congress Subject Cataloging Manual: Shelflisting, G10, "Basic classification terminology"):

G 10  BASIC CLASSIFICATION TERMINOLOGY

Classify
To categorize, in order to arrange materials on the shelves according to subject, using a classification system.

Classification schedules
The printed volumes or machine-readable database that contain classification numbers and captions, arranged by subject in a logical, hierarchical manner; also called schemes.

Class number
A number that represents what the item being cataloged is about, selected from the schedules.  
Example:
GV856 = Bobsledding. Tobogganing

Call number
A number consisting of a class number, a book number, and additional information that uniquely identifies the item. The call number is printed on the label affixed to a bibliographic item, so that the item can be shelved and found. Example:
Title: Treasures of the Library of Congress
Call number: Z733.U58G66 1991

Book number
An alpha-numeric device appended to a class number to arrange material on the same subject in a specified order, usually alphabetically by author. Also called author number. Example:
Call number: Z733.U58G66 1991
Book number: G66 [for the author's surname Goodrum]

Cutter number
An alpha-numeric device for representing words or names by using one or more letters followed by one or more arabic numerals used decimally. Named for Charles Ami Cutter, who developed several tables using letters and numbers to achieve an alphabetical arrangement. Book numbers and some subdivisions in the classification schedules are types of Cutter numbers. Example:
Call number: Z733.U58G66 1991
Shelflisting
The activity of arranging materials within an existing collection, normally by author; the activity of determining the book or author number and necessary additions to the call number for a unique number. Shelflisting also is the activity of documenting the holdings of a collection as to location, volumes, and copies, providing an inventory of the collections.

Shelflist
A file of bibliographic records arranged in the same order as the corresponding materials on the shelves.

**BIBLIOGRAPHY:**

6. *Library of Congress online catalog:*
   http://catalog.loc.gov/
ADDENDUM A:

SEL CONFERENCES:

Use call number established in Voyager for the conference; add the date of the conference proceedings to distinguish the item

- Use conference date in call number only if there is a 1xx field for the conference in the bib. Record
- PCC/LCCopycat will sometimes mysteriously have a different class number than previous conferences even though the subjects stay the same. In this case we check to see which class # is correct and use it.
- If the latest conference is DLC and both the classification and subjects have changed, we verify changes and accept if OK; check shelflist in Voyager and accept cutter if there are no conflicts.

Notes/Questions based on previous SEL practices:

- New Class Numbers -- Sometimes the subject will remain the same, but a new class number will have been established. Usually, if it's LC, we take the new class number and then make a decision as to whether or not it is worthwhile to reclass/relabel previous conferences (e.g. Image processing was classed as TA1630 – General works, but now has its own number TA1637).
- Changes in Cataloging Practice -- Due to changes in cataloging practice, it is now okay to enter conference name headings as 1xx fields even if the conference name is not found on the t.p. Prior to this change, conferences were entered as 7xx fields if not on the t.p. and cuttered for the title. After the changes, SEL cuttered for the conference and determined whether or not it is worthwhile to recutter/relabel previous conferences.
- Conference name changes -- SEL used to change the cutter every time the conference name heading changed. We now use the same classification and cutter as the earliest conference and reclass/recutter everything else to match. We send Lorelyn an email listing which books need to be relabeled. This is something that Luiz and I worked on a few times.
ADDENDUM B:
DATES IN CALL NUMBERS
From: Subject Cataloging Manual: Shelflisting, G140

BACKGROUND: In 1982, the decision was made to add the imprint date to the call number of all monographic works. Prior to that date, several formal and informal memos were used as guidelines to determine if a date was needed in the call number. This instruction sheet provides guidelines on adding the date to the call number for monographic works.

PROCEDURES:
1. General rule. Add the date of imprint to all monographs. Examples:

   1976?           use 1976
   ca. 1976        use 1976
   1981, cl980     use 1981
   1971, cl972     use 1972
   1979 [i.e.1978] use 1978
   1962 or 1963    use 1962
   1969 (1973 printing) use 1969
   1980 printing, c1957 use 1957
   1979 [distributed] 1980 use 1979
   1979-1981       use 1979
   between 1977 and 1980 use 1977
   1978/79 [i.e. 1978 or 1979] use 1978
   1977 (cover 1978) use 1978
   197-            use 1970z [if corporate body, use 1970]
   197-?           use 1970z [if corporate body, use 1970]
   19--            use 1900z [if corporate body, use 1900]
   19--?           use 1900z [if corporate body, use 1900]

2. Special situations.
   a. Congress or conference headings. If the date of a congress or conference is present in the heading, use the date of the congress or conference. If a date is not present, use the imprint date (cf. G 230). Example:

b. **Multiparts.** Add the date of imprint of the first/earliest part (i.e. the earliest date found in either the 260 field or the 362 1 field) to the call number, unless the new multipart item is in a larger multipart item/monographic series classed as a collection. (See the ILS supplement, Workflow #4 for details).

c. **Photocopy or facsimile editions.** Add the date of the original edition and the work letter a.

d. **Other editions.** For later editions of the same work, use the imprint date. If another edition is received with the same imprint date, use the work letters starting with b. Examples:

. I33 1982
. I33 1982b
. I33 1982c, etc.

e. **Corporate authorship.** For works entered under a corporate body, use the imprint date. If another work by the same corporate body is received, use work letters starting with a (cf. G 220). Examples:

. R37 1981
. R37 1981a
. R37 1981b, etc.

f. **Printing dates in the note area.** Disregard the printing dates in the note area and use the imprint date. Example:

260 $c [1982-<1984>

use 1982 in the call number

g. **Date in main entry uniform title area.** When there is a date in the main entry uniform title area, use the imprint date. Example:

130 0# $a Survey of minority owned business enterprises (1982)

use 1985 in the call number

3. **Exceptions to adding a date.**

a. **Supplement and indexes.** Do not add a date to the call number after the designations Suppl. or Index. Examples:

. C64 1977
. C64 1977 Suppl.
. C64 1977 Suppl. 2
. C64 1977
. C64 1977 Index
. C64 1977 Index 2
b. **Classes subarranged by date only.** If a work is classed in an area which is subarranged by date only, do not add another date to the call number. Instead, add a work letter starting with a to the date. Example:
CD1106 1918
CD1106 1918a, etc.

In the classification schedule:
PR5551 Tennyson, Alfred Lord
Selected works. By date

In the shelflist:
PR5551 1968
PR5551 1968a

c. **Classes subarranged by date and main entry.** If a class is subarranged by date and main entry add the imprint date to the number. Follow this instruction even if a date appears as part of the classification number. Example:
In the classification schedule:
GV722 Olympic games. (Modern revivals)
Individual contests. By year
Subarrange by author

In the shelflist:

d. **Loose-leaf materials.** Do not add a date to call numbers for the following types of publications:

- Loose-leaf services that are cataloged as such, with “loose-leaf” in subfield $a$ of the 300 field of the bibliographic record, and continuously kept up to date. (Not all publications with holes in pages are “updating loose-leaves.” The term “loose-leaf” appearing with an ISBN is not sufficient indication that the publication is an “updating loose-leaf.”)
  Note: Although this rule applies to all classes, the vast majority of such publications are in Class K.
- Legal publications where the final Cutter is selected from a span based on dates. For these publications, the date is “built in” to the final Cutter and the further addition of a numerical date is superfluous.
  For example, in Table KFA-KFZ 30.A3-39, the instruction is to subarrange chronologically. The choice of Cutter in the span .A3-39 is based on the date of the publication, and the further addition of a numerical date is unnecessary.
Note: In the rare cases where it is necessary to distinguish between different editions of these types of publications, use successive Cutter numbers.
